

Case study

Leasing Slovenskej sporiteľne has moved to the cloud with Microsoft Dynamics 365 and innovates with the Seyfor OneCore module.

Increased process efficiency

Faster service delivery

Reduced IT infrastructure costs

In 2018, with Seyfor's support, Leasing Slovenskej sporiteľne successfully implemented the on-premises Microsoft Dynamics NAV 2017 system along with the OneCore solution. As their business grew and services expanded, it was time for the next step in digital transformation: transitioning to the cloud-based Microsoft Dynamics 365 Business Central, which offers a modern environment and numerous innovative features.

Seyfor OneCore Implementation Story

In this project, Leasing Slovenskej sporiteľne transitioned from the established on-premises Microsoft NAV 2017 solution to the cloud-based Dynamics 365 Business Central and OneCore. This step represents more than just a technological change. The company is moving towards the digitalization and centralization of internal processes, which brings significant benefits to clients as well.

The project, with a clear goal, lasted one year, with the final phase - Go Live, being completed according to the established plan and schedule. The teams on both sides played a key role in the success of the project. Having already had one successful collaboration, they once again demonstrated cooperation and mutual support, which was evident even in more challenging situations and approaching deadlines.

Cooperation and Challenges

Every team member, from Seyfor and Leasing Slovenskej sporiteľne, brought something unique to the project - from invaluable analytical skills to creative ideas and extensive technical experience from past projects.

Despite this, the project faced challenges that were successfully resolved thanks to the professional approach of both parties. In the initial phase, access rights were set to maintain the security standards of

both organizations. Security was a priority throughout the project, leading to the implementation of new protocols ensuring data security during system exchanges, with an emphasis on encryption and authentication.

Technical issues arose during the migration of backups from the local environment to the cloud due to the large volume of transferred data. These were resolved using specialized data migration tools and optimizing transfer processes.

During the implementation, several versions were created, requiring analyses of differences in the data model and adjustments. The process was managed using agile methodologies and regular meetings, ensuring effective handling of arising changes.

Outcome

The new system allows the client to manage operations more efficiently and deliver services faster. The cloud solution provides more flexible access to data, better scalability, and lower IT infrastructure costs.

Leasing Slovenskej sporiteľne has gained a modern and flexible solution ready to support technological development and company growth. By digitizing processes and transitioning to the cloud-based Dynamics 365 Business Central and its OneCore extension, they have opened a new chapter in innovation and service impro-

vement. The goal of this progressive step is to modernize internal activities and strengthen the company's market position.

OneCore Solution

The OneCore solution for leasing companies extends the standard functionalities of the Microsoft Dynamics 365 Business Central ERP system with everything a leasing company needs. Leasing Slovenskej sporiteľne implemented the comprehensive OneCore solution.

„Leasing financing at Slovenská sporiteľňa has dynamically grown in recent years, thanks to the Microsoft Navision platform and the OneCore module from Seyfor.”

Martin Trúchly

Head of Specialized Financing Department

„However, our growth ambitions increase every year, and we want to maintain or even enhance efficiency. Plus, technological development is dynamically advancing. Therefore, after 5 years, we decided to upgrade the Navision platform to a higher version of Business Central and move from an on-premises version to a cloud solution.”

About Seyfor

Seyfor serves more than 250,000 satisfied corporate customers in 15 countries, capable of covering up to 100% of their needs in information technologies and systems. Currently, it employs over 1,200 people and aspires to become a European leader in enterprise information systems. Seyfor holds the highest level of Microsoft Solutions Partner – Business Applications and is a certified supplier of its own Dynamics 365 technology solutions.

„We firmly believe that new business functionalities will contribute to the further dynamic growth of our leasing financing, and we will be able to bring clients faster processing of their requests with a simple and intuitive approach, mainly thanks to a higher degree of digitalization within the bank's processes.”

Martin Trúchly

Head of Specialized Financing Department

About Leasing Slovenskej sporiteľne

Slovenská sporiteľňa is the largest commercial bank in Slovakia in terms of the number of clients and the volume of deposits. It is part of Erste Group, one of the largest providers of financial services in Central and Eastern Europe. Through its subsidiary, Leasing Slovenskej sporiteľne, it provides a wide range of leasing services for individuals, freelancers, small and medium-sized enterprises, and large corporations. Services include financing the purchase of vehicles, machinery, technological equipment, and other investments through financial or operational leasing.

**Thank you, Leasing Slovenskej sporiteľne,
for being part of our code!**

MAJOR BENEFITS

**Data is automatically backed up
and can be easily restored,
enhancing security.**

**Software is automatically
updated regularly, ensuring
users always work with the
latest version.**

**Cloud solutions are easily
scalable, allowing for the
addition of users and functions
as needed.**
